Literature Review

Yonatan Vaizman

I. Audio processing

[1] for speech coding tutorial.....

A. LPC

Good tutorial for linear prediction framework [2]. [3], [4]...

B. Vocoders

[5]....

C. Frequency-warped LPC

D. Fourier space excitation-filter framework

E. Filterbanks (overcomplete codebooks?) for speech analysis

Speech coding with VQ [4]....

II. Optimization and learning

A. LPC optimization

Good tutorial for linear prediction framework [2]. Makhoul talks about the squared error criterion, its advantages and shortcomings and when it might not fit the best spectral envelop (when the excitation input to the system is a pitched periodic pulse train — in which case the peaks of the estimated filter coincide with the harmonics instead of the better fitting envelop).

B. L2, L1 minimizations

C. Optimization of mixtures

D. Sparsecoding and compressed sensing

E. LTI filter clustering

Perceptually consistent measures of spectral distance [6].... Speech coding with VQ [4]....

III. MIR applications

A. Source separation

[7]....

B. Melody extraction and automatic transcription

[8]–[10].... Guitar chords and fingering [11]....

C. Chord recognition

D. Instrument recognition

[12], [13].... Polyphonic and polyinstrument [14].... Instrument recognition (temporal and cepstral features) [15].... Identifying woodwind instruments [16]..... Multitrack mixing: [17], [18]....

IV. Datasets
